

SCOTT BAKER

Seattle, WA • 253-777-2467 • william.scott.baker@gmail.com • LinkedIn: [linkedin.com/in/williamscottbaker](https://www.linkedin.com/in/williamscottbaker)

SENIOR SOFTWARE ENGINEER (C#/.NET • AZURE • BACKEND SERVICES)

Hands-on backend engineer with deep C#/.NET experience building and operating production systems and internal platforms in Azure environments. Strong focus on service reliability, automation, data correctness, and end-to-end ownership: design, implementation, deployment, telemetry, and operational support. Comfortable debugging complex service issues, improving system behavior, and partnering across business and engineering stakeholders.

CORE SKILLS

- Languages/Frameworks: C#, .NET, ASP.NET Core, REST APIs, gRPC, SignalR
- Cloud/Platform: Microsoft Azure, Azure Functions, Azure AD (Entra ID), Managed Identity, Microsoft Graph
- Delivery/Operations: Azure DevOps, CI/CD pipelines, release/deployment automation, PowerShell
- Observability: Azure Monitor alerts, Application Insights and telemetry
- Data: SQL, data integration, data consistency across systems
- Practices: Code reviews, performance & reliability mindset, stakeholder collaboration

PROFESSIONAL EXPERIENCE

MICROSOFT (AIM Consulting / Addison Group)

Sr. Software Developer (Full-Stack, Azure & Internal Tools)

- Owned end-to-end improvements to internal tools supporting Microsoft Research workflows, from design and implementation through deployment and operational stability
- Restored and stabilized identity synchronization by bringing the AD Sync function back online and aligning identity data flows
- Leveraged AI-assisted development tools (GitHub Copilot, CLI agents, VS Code/Visual Studio Copilot, Claude) daily to accelerate backend service development and debugging, including building internal agents and MCP servers to automate workflows and improve efficiency in production system development
- Modernized the Intern Space Management platform to use authoritative floorplan sources, eliminating mismatches caused by divergent data inputs
- Improved operational readiness and deployment flow by working through Azure DevOps release pipeline execution and troubleshooting deployment automation failures
- Contributed to telemetry-oriented engineering by reviewing changes that touched Application Insights event emission and related client telemetry wiring
- Partnered with program stakeholders to scope, deliver, and roll out changes on production-facing internal tools with clear release coordination

FRESH CONSULTING

Senior Software Developer 1

- Diagnosed and resolved issues in distributed production systems, performing root-cause analysis and implementing fixes to improve availability and system reliability
- Delivered full-stack applications using .NET, C#, Azure, and modern frontend technologies; automated workflows to reduce manual overhead
- Built a Python and C# application utilizing AI for encrypted communication, accelerating delivery timelines by 50%
- Improved real-time data flow by integrating SignalR and gRPC with REST APIs, reducing error rates from 30% to 2%
- Optimized WPF application performance, eliminating customer complaints related to responsiveness
- Implemented OAuth2 authentication with Azure Active Directory and external identity providers to strengthen access control and security posture

BOEING

Software Developer

- Engineered a hybrid WinForms/WPF application to automate training resource development, saving hundreds of hours monthly
- Built internal ASP.NET applications for real-time reporting, reducing turnaround time and saving 160+ hours per month
- Designed data schema and integration workflows across multiple systems, eliminating manual data processing and improving data availability
- Led migration from VersionOne to TFS, improving delivery workflows and reducing annual software costs
- Automated internal processes to improve accuracy, reduce manual effort, and increase operational efficiency
